Patent No. 5952546

GENERAL INFORMATION:
APPLICANT: Bechrock, John R.
APPLICANT: Howie, William J.
APPLICANT: Howele, William J.
APPLICANT: Lee, Kathleen Y.
TILLE OF INVENTION: Delayed Ripening Tomato Plants
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target the first population to recombine with the first target nucleic acid molecules of molecules to form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid with a second target nucleic acid with a second target nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence

The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid; (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of molecules to form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid; and (d) causing some or all of the nucleic acid molecules of the second population to
